

Model 249 PV10 6-50V2A  
Item no.: 5051520

## Earthing conductor connection terminal

For the inclusion of PV mounting systems

The pre-mounted earthing terminal from the OBO portfolio is suitable for integrating the Magic PV Solution and other PV mounting systems with 10mm slot in an external lightning protection system. In so doing, it again shows how the individual components of the OBO complete solution intermesh for a completely protected PV system. The integrated spring mechanism enables rapid and simple mounting. The earthing terminal is suitable for round conductor fastening (RD 8-10) and to fasten single or multi-wire cables (6–50 mm<sup>2</sup>).

### Overview of the benefits of the pre-mounted earthing terminal

- Lightning current carrying capacity up to 100 kA (10/350)
- For profiles with 10 mm groove
- Conforms to the requirements of IEC/EN 62561-1
- Corrosion-resistant VA quality
